

FREE 10-Hour Course in OSHA's Construction Industry Regulations

Course Overview

The 10-hour Construction Industry Outreach Training Program is intended to provide entry level construction workers general awareness on recognizing and preventing hazards on a construction site. The training covers a variety of construction safety and health hazards which a worker may encounter at a construction site. OSHA recommends this training as an orientation to occupational safety and health. Training will emphasize hazard identification, avoidance, control and prevention, not OSHA standards.

This interactive 1½-day course satisfies this requirement and is being offered to business owners, managers, supervisors and employees with responsibility for safety and health. The course addresses general safety and health awareness of the *29 Code of Federal Regulations 1926, Construction Industry Regulations*.

Each attendee will receive the CFR 1926, OSHA Construction Industry Regulations (\$40 value) which will be used throughout the course.

After successfully completing this training course, each participant will receive an OSHA Construction Industry Safety and Health 10-Hour course completion card.

Topics include:

- § Introduction to OSHA: OSH Act / General Duty Clause, General Safety & Health Provisions, Competent Person, Recordkeeping
- § Personal Protective & Lifesaving Equipment
